## AVOCADO CLONAL ROOTSTOCK PRODUCTION TRIAL

M. L. Arpaia, G. S. Bender and G. Witney

Botany & Plant Sciences, U. of California, Riverside

Coop. Ext., San Diego County

Coop. Ext. Riverside County

We are continuing to monitor the performance of the 'Hass' and 'Gwen' cultivars on selected clonal rootstocks. The third harvest of Hass will be collected in April/May 1990. In addition, we will begin to collect tree phenology data for selected rootstocks in the Hass planting this spring. We will continue collecting this data for at least 3 years. Annual growth measurements will be taken in June for the Hass trial and September for the Gwen planting.
